

Ithaca College Library's RBDB Final Report 2015

Project: Purchase of a Bookscan Scanning Station for Resource Sharing

From Project Manager Bernard Hogben, December 21, 2015:

The book edge scanner has been purchased and received. IC supplied a new touch screen monitor and CPU. As of this morning, the scanner is functional and all features working properly (I just ***now*** got the email option properly configured).

It scans very fast, much faster than the copier/scanner we were using, and the images immediately appear on the touchscreen monitor so we know the quality of the scans. We will be able to test it more thoroughly in January when we return from break.

Update June 6, 2016:

We are using the scanner for lending and also scanning IC yearbooks. The scanner is very fast, which makes our workflow much more efficient. We are very happy with it.
